

Industrial property rights for patent EP 2594824 "Self-adjusting chain sprocket"
for **Germany and Czech Republic**

Ladies and Gentlemen,

perhaps I should have behaved exactly like the German physicist Wilhelm Conrad Röntgen (*27 March 1845 in Lennep, today Remscheid); † February 10, 1923 in Munich), who had waived a patent on the X-ray machine he had developed in order to be able to distribute it more quickly.

But then, after careful consideration, I said to myself, "How do I get around to this "? I have drawn the attention of the Minister of Economic Affairs and also the Minister of the Environment as well as all the ministries of the environment in Germany to the enormous savings and, as a result, the enormous protection of the environment. Obviously, nobody cares.

At my last of **5 invitations from** the company RUD I was informed after a few days: We will not use the self-adjusting chain sprocket to reduce wear and thus costs for the benefit of the operators, "we will continue on our way".

Yes, and that's exactly what I'm going to do, I'm going on my way and in Germany the "self-adjusting chain sprocket", whose predecessor patent has been in use for over 6,800 days !!! is in use without any problems, **CANNOT** be used. It can **only** be used in our country if a manufacturer buys the patent rights. In the next few days I will offer this patent for sale on all existing patent exchanges.

Kempenich, 8 December 2019

Karl Herkenrath
